FISCAL DATA FOR STATE WORKERS' COMPENSATION SYSTEMS 2003 - 2012

I. Summary of Results

This Bulletin reports on state workers' compensation benefit payments and trends from 2003 to 2012. The Bulletin provides new data for 2012, and certain revised data for 2008 - 2011. *Please note that the numbered tables referred to in the text are attached at the end. For online readers, each numbered table is contained in a separate file on this portion of the "Members Only" section of the UWC website.* Readers should also know that the National Academy of Social Insurance (NASI), which provides the data for the Bulletin, is no longer providing revised data on a state by state basis for private insurers, self-insurers, or state funds. This data is therefore not available for the revised years 2008 – 2011. Revised data for these years is available for total benefits, medical benefits, and cash benefits. The results of the Bulletin are summarized as follows:

- Total workers' compensation payments (indemnity and medical) increased by \$6.5 billion (12.7%) from 2003 to 2012, and by \$817.4 million from 2011 to 2012 (1.4%). These changes are illustrated in the following chart, which also details the changes during the same time periods for private insurance, self insurance and state funds.

- Total indemnity benefits increased by \$1.7 billion (6.3 %) from 2003 to 2012, and by \$540.0 million (1.9%) from 2011 to 2012.
- Total medical benefits increased by \$4.8 billion (19.4%) from 2003 to 2012, and by \$277.5 million (0.9%) from 2011 to 2012.
- State specific benefit costs have declined noticeably during the past ten years. The average benefit cost rate (cost per \$100 of covered payroll) decreased from 1.13 to 0.95 (-15.9%) from 2003 to 2012, and by 0.03 (-3.1%) from 2011 to 2012. The states and the jurisdiction with the largest decreases during this period were the District of Columbia (-13.3%), Illinois (-14.5%), Michigan (-12.8%), Ohio (-8.4%), and West Virginia (-12.1%). The states with the largest increases during this period were Arkansas (4.0%), Colorado (5.5%), Maine (18.2%), New Mexico (8.1%), and Vermont (2.5%). Ranked by benefit cost rate, eleven states increased or decreased their rank by at least ten places from

2003 to 2012. (Please note that a ranking of 1 indicates the lowest cost rate so in this context “improvement” means moving to a lower number.) The states with the largest improvement were Hawaii (45 to 35), Kentucky (43 to 29), Missouri (29 to 17), Nebraska (33 to 23), and Tennessee (24 to 11). The states with the largest declines were Delaware (24 to 35), Georgia (10 to 20), New Jersey (15 to 32), New Mexico (21 to 37), and New York (13 to 32).

- It is also useful to examine national trends outside of California, which contributed 13.6% of national payroll and 19.8% of total benefits in 2012. Total benefit payments in California increased by 5.9% from 2011 to 2012, a much smaller increase than the 13.4% increase from 2010 to 2011. Total payments increased by 17.7% from 2008 to 2012, but decreased by 7.6% from 2003 to 2012. The largest increase or decrease occurred from 2004 to 2005 when total benefits decreased by 12.7%, which is probably attributable to the implementation and effects of comprehensive workers’ compensation reform the state enacted in 2003.

Total benefit payments increased in most states from 2011 to 2012, with the largest increases occurring in Colorado (10.4%), Maine (20.9%), New Mexico (11.1%), North Dakota (19.9%), and Texas (7.7%). The states and jurisdiction with the largest decreases during this period were the District of Columbia (-10.9%), Illinois (-11.3%), Michigan (-8.6%), Nevada (-5.5%), and West Virginia (-9.5%). There was a 1.4% national increase during this period, compared with a 5.0% increase from 2008 to 2012, and a 12.7% increase from 2003 to 2012. The most recent increase is a result of the somewhat improving economy, although it is much less than the 4.5% increase from 2010 to 2011. More workers tend to unfortunately have more work related injuries, at least on a national scale. This is especially true in manufacturing, industrial, and construction work, occupations which typically have the highest number of work related injuries. These industries experienced a significant decline in the number of workers and job openings during and following the recession.

California medical payments increased by 5.3% from 2011 to 2012, a much smaller increase than the 20.7% increase from 2010 to 2012. Medical benefits in most states increased from 2011 to 2012, with the largest increases occurring in Arkansas (9.8%), Colorado (12.0%), Maine (15.2%), New Mexico (12.4%), and North Dakota (21.7%). The states and jurisdiction with the largest deceases during this period were the District of Columbia (-9.9%), Illinois (-18.4%), Maryland (-5.2%), Michigan (-16.1%), and Ohio (-11.6%). The benefit cost rate decreased by 0.7% in California from 2011 to 2012. The benefit cost rate of most other states decreased during this period, and there was a national decrease of -3.1%. The table below summarizes national trends for 2011 and 2012 outside of California.

Total Non-Federal Workers’ Compensation Benefits, Coverage, and Costs (excluding California)

Aggregate Amounts	2011	2012	Percent Change
Covered workers (in thousands)	108,659	110,409	1.6
Covered wages (in millions)	\$5,062,961	\$5,276,770	4.2
Benefits paid (in thousands)	\$46,405,675	\$46,577,581	0.4
Medical benefits	\$23,148,590	\$23,090,329	-0.3
Indemnity benefits	\$23,257,086	\$23,487,251	1.0
Benefit Cost Rate	0.98	0.95	-3.1

II. Scope of Bulletin

This bulletin provides data for: (1) total workers' compensation payments (indemnity and medical); (2) private insurance payments; (3) self-insurance payments; (4) state fund payments; (5) percentage distribution by payer; (6) medical benefits; (7) benefits per covered worker (average benefit cost per covered employee); and (8) the benefit cost rate (benefits per \$100 of covered payroll). In addition to growth in covered employment and wages, other factors affecting benefit payments include changes in benefit levels, legal and medical standards for establishing work causation, and measuring permanent disability, medical costs, administrative practices, the percentage of the labor force employed in dangerous occupations, and statutory coverage. These data are for the states and the District of Columbia, and include payments made under the Longshore and Harbor Workers' Compensation Act, but not payments made to federal employees and their dependents under the Federal Employees' Compensation Act, the Black Lung Benefits Act, the Energy Employees Occupational Illness Compensation Program Act, the Radiation Exposure Compensation Act, the veterans compensation program, and programs providing benefits to railroad workers involved in interstate commerce and merchant seamen.

Methodology for Determining Covered Workers and Payroll

The Social Security Administration (SSA) originally estimated the number of workers in each state covered by workers' compensation laws, as well as the amount of benefits paid. But SSA discontinued this work in 1995, after publishing data for 1992-1993. NASI subsequently began compiling this data in 1997 and used the number of workers covered by state unemployment insurance (UI) programs to determine the number of workers potentially covered by state workers' compensation laws. The number of workers covered by state UI programs is collected nationally, based on the quarterly tax reports that employers submit to state UI agencies. For 1993-1996, NASI estimated that the number of workers covered by state workers' compensation laws was approximately 97% of the total number of workers covered by state UI programs who were not federal workers, plus the total number of federal workers.

Beginning in 1997, NASI started refining its estimation by considering the various differences in UI and workers' compensation coverage rules in each state. Considering these differences produced an approximation similar to that used from 1993 to 1996, namely that in 2012 approximately 97.2% of the non-federal UI covered workforce, plus all federal employees, were covered by workers' compensation. Readers should note that this method of calculation is impossible in Texas, the only state where workers' compensation coverage is voluntary and not required to be obtained by employers. Therefore, workers in Texas covered by UI cannot be used to estimate the number of workers potentially covered by workers' compensation. Coverage estimates for Texas are based on periodic surveys conducted by the Texas Workers' Compensation Research and Oversight Council, the Texas Department of Insurance, and the Workers' Compensation Research and Evaluation Group. These groups estimated that approximately 81% of Texas employees were covered in 2012, excluding federal government workers in that state. It should be noted that recent legislation in Oklahoma provided for optional coverage that may require a change in methodology for future reports.

Deductible Policies

Deductible policies generally require workers' compensation insurers to pay 100% of all indemnity and medical benefits but contractually obligate the insured employer to reimburse the insurer for a portion of this amount. The deductible is the amount that the employer must reimburse. Deductible policies can be written based on a per claim or an aggregate basis, or a per claim basis with an aggregate monetary limit. Employers with deductible policies are essentially self-funding for the amount of the deductible and, consequently, pay lower workers' compensation premiums. Nonetheless, deductibles are considered an insurance expenditure because insurers are ultimately liable for all amounts, including any monies not

reimbursed by employers. Accordingly, amounts reimbursed to insurers under deductible policies are included in the “private insurance” and “state fund” data.

Total Payments vs. Total Costs

Total workers’ compensation indemnity and medical payments in Table 16 should not be mistaken for the “total cost” of workers’ compensation to employers. These “total payments” represent indemnity and medical care payments made during the calendar year on all claims, including benefits paid for new injuries in the current calendar year and payments in the current year on open claims for injuries that occurred in prior years. “Total costs” for those employers insured through private insurers and state funds are the premiums paid, plus any deductibles, surcharges, and assessments. Premiums reflect the actuarial value of all benefit payments and related costs and expenses for all injuries that occur while the policy is in effect. They include allocations for current benefit payments as well as reserves for future benefit payments, claims adjustment expenses, acquisition costs, taxes, assessments, licenses, fees and other operating costs, and a profit factor. “Total costs” for self-insured employers are estimated as benefits paid plus costs for claims administration, taxes, fees and assessments.

III. Analysis

Total benefit expenditures are one widely accepted measure of the total economic burden of social insurance programs in each year. The figures for state workers’ compensation expenditures in this bulletin can be better understood by comparing them to the total number of covered workers and the total of covered payroll, or costs per \$100 of covered payroll.

Cost Per \$100 of Covered Payroll (Benefit Cost Rate)

The benefit cost rate is the cost per \$100 of covered payroll. Table 1 on page 14 ranks the states according to their benefit cost rate. Table 2 on page 15 lists the benefit cost rate by state from 2003 to 2012. The national totals in this table are determined using the total amount of covered payroll and benefits for each year, while the state averages in this table are determined by adding all the state calculations for each year and then dividing this number by the total number of jurisdictions (fifty-one). The national benefit cost rate declined from 1.13 to 0.95 from 2003 to 2012 (-15.9%). Table 3 on page 16 lists the percentage changes in the benefit cost rate for each state from 2003 to 2012. The national totals in this table are determined using the differences between the national figures from Table 2 over a given time period, while the state averages in this table are determined by adding all the percentage changes for a given time period and then dividing this number by the total number of jurisdictions (fifty-one).

National Average Benefit Cost Rate

Year	National Total	Annual Change in Amount	Annual % Change
2003	1.13	NA	NA
2004	1.10	-0.03	-2.7
2005	1.06	-0.04	-3.6
2006	0.96	-0.10	-9.4
2007	0.93	-0.03	-3.1
2008	0.96	0.03	3.2
2009	1.00	0.04	4.2
2010	0.97	-0.03	-3.0
2011	0.98	0.01	1.0
2012	0.95	-0.03	-3.1

NASI notes that in Washington state both employers and employees contribute to workers' compensation premiums. The data reported include only the employer portion.

Cost Per Covered Employee

Tables 4 to 13 on pages 17-26 display the number of covered workers, covered payroll, benefits paid, benefit costs per covered employee, and benefit cost rates from 2003 to 2012. The benefit cost per covered employee for each state is determined by dividing the amount of benefits by the number of covered workers. The national totals in these tables are determined by using the total amount of benefits, covered workers, and covered payroll for each year. The state averages are determined by adding all the state calculations for a given time period, and then dividing this number by the total number of jurisdictions (fifty-one). The benefit cost per covered employee for each state for 2012 is as follows:

\$200 or Less AR (\$196)
DC (\$195)

\$201 - \$299 IN (\$226) VA (\$272)
SD (\$243)
TX (\$203)
UT (\$249)

\$300 - \$399 AL (\$383) ID (\$396) MI (\$316) NV (\$336) TN (\$321)
AZ (\$300) KS (\$330) MS (\$334) NH (\$379)
CO (\$384) KY (\$384) MO (\$345) NC (\$383)
GA (\$399) MA (\$307) NE (\$350) ND (\$379)

\$400 - \$499 FL (\$415) LA (\$469) OH (\$429)
HI (\$437) MD (\$411) OR (\$410)
IL (\$488) MN (\$402) RI (\$403)
IA (\$445) NM (\$422) WI (\$434)

\$500 - \$599 CT (\$551) PA (\$533)
DE (\$541) SC (\$529)
ME (\$541) VT (\$505)
NJ (\$595) WY (\$599)

Over \$600 AK (\$798) OK (\$622)
CA (\$784) WA (\$840)
MT (\$606) WV (\$702)
NY (\$640)

Table 14 on page 27 lists the benefit cost per covered employee for each state, the national average benefit cost per covered employee, and the state average benefit cost per covered employee from 2002 to 2013. The national totals in this table are determined by dividing the total amount of benefits by the total amount of covered workers for each year, while the state averages are determined by adding all the state calculations for a given year and then dividing this number by the total number of jurisdictions (fifty-one). Table 15 on page 28 lists the percentage changes in the benefit cost per covered employee for each state from 2003 to 2012. The national totals in this table are determined using the differences between the national figures from Table 14 over a given time period, whereas state averages in this table are determined by adding all the percent changes for a given time period and then dividing this number by the total number of jurisdictions (fifty-one).

National Average Benefit Cost Per Covered Employee

Year	National Total	Annual Change in Amount	Annual % Change
2003	\$423	NA	NA
2004	\$430	7	1.6
2005	\$429	-1	-0.1
2006	\$405	-24	-5.7
2007	\$411	6	1.6
2008	\$433	22	5.2
2009	\$450	17	4.0
2010	\$451	1	0.3
2011	\$466	15	3.2
2012	\$464	-2	-0.3

The national benefit cost per covered employee increased by \$31 (7.3%) from 2008 to 2012, and by \$41 (9.8%) from 2003 to 2012. The benefit cost per covered employee decreased in most states from 2011 to 2012, with the largest decreases occurring in the District of Columbia (-13.1%), Illinois (-12.4%), Michigan (-10.6%), Nevada (-6.9%), and West Virginia (-10.7%). The states with the largest increases during this period were Arkansas (6.4%), Colorado (7.8%), Maine (20.2%), New Mexico (10.4%), and North Dakota (10.2%).

Total Workers' Compensation Indemnity and Medical Benefit Payments

Table 16 on page 29 details the total workers' compensation payments (indemnity and medical) from 2003 to 2012. The state averages in this table are determined by dividing the national totals by the total number of jurisdictions (fifty-one). Table 17 on page 30 displays the percentage change by state from 2003 to 2012. The national totals in this table are determined by using the differences in national figures from Table 16, while the state averages in this table are determined by adding all the percentage changes for a given time period, and then dividing this number by the total number of jurisdictions (fifty-one).

Annual Workers' Compensation Indemnity and Medical Benefit Payments

Year	National Total (\$000)	Annual Change in Amount (\$000)	Annual % Change
2003	\$51,554,290	NA	NA
2004	\$52,892,469	\$1,338,179	2.6
2005	\$53,808,795	\$916,326	1.7
2006	\$51,626,040	-\$2,182,755	-4.2
2007	\$53,044,751	\$1,418,711	2.7
2008	\$55,326,554	\$2,281,803	4.3
2009	\$54,892,762	-\$433,792	-0.8
2010	\$54,793,011	-\$99,751	-0.2
2011	\$57,263,814	\$2,470,803	4.5
2012	\$58,081,235	\$817,421	1.4

Total workers' compensation payments increased by \$2.8 billion (5.0%) from 2008 to 2012, and by \$6.5 billion (12.7%) from 2003 to 2012. Total benefit payments increased in most states from 2011 to 2012, with the largest increases occurring in Colorado (10.4%), Maine (20.9%), New Mexico (11.1%), North Dakota (19.9%), and Texas (7.7%). The states and jurisdiction with the largest decreases during this period were the District of Columbia (-10.9%), Illinois (-11.3%), Michigan (-8.6%), Nevada (-5.5%), and West Virginia (-9.5%). The national 1.4% increase from 2011 to 2012 followed a 4.5% increase from 2010 to 2011.

Private Insurance Payments

Table 18 on page 31 details private insurance benefit payments (indemnity and medical) from 2003 to 2012. The state averages in this table are determined by dividing the national totals by the total number of jurisdictions (fifty-one for every year from 2003 to 2012, except for fifty in 2006 and 2009, and forty-nine in 2005). Table 19 on page 32 displays the percentage change by state from 2003 to 2012. The national totals in this table are determined by using the differences in national figures from Table 18, while the state averages in this table are determined by adding all the percentage changes for a given time period and then dividing this number by the total number of jurisdictions.

Annual Private Insurance Indemnity and Medical Benefit Payments

Year	National Total (\$000)	Annual Change in Amount (\$000)	Annual % Change
2003	\$28,394,722	NA	NA
2004	\$28,631,582	\$236,860	0.8
2005	\$29,039,067	\$407,485	1.4
2006	\$27,946,464	-\$1,092,603	-3.8
2007	\$29,410,376	\$1,463,912	5.2
2008	\$30,795,628	\$1,385,252	4.7
2009	\$31,061,310	\$265,682	0.9
2010	\$31,160,818	\$99,508	0.3
2011	\$32,235,674	\$1,074,856	3.4
2012	\$33,429,362	\$1,193,688	3.7

Total private insurance payments increased by \$2.6 billion (8.6%) from 2008 to 2012, and by \$5.0 billion (17.7%) from 2003 to 2012. Total private payments increased in most states from 2011 to 2012, with the largest increases occurring in California (15.3%), Maine (32.1%), New Mexico (13.9%), Oregon (16.8%), and Utah (18.7%). The states with the largest decreases during this period were Delaware (-4.6%), Idaho (-8.3%), Illinois (-11.3%), Michigan (-7.0%), and South Carolina (-4.5%). The national 3.7% increase from 2011 to 2012, and 3.4% increase from 2010 to 2011, followed much smaller 0.3% and 0.9% increases from 2009 to 2010, and 2008 to 2009. The larger increases were the result of an improving economy. Work place injuries increase as more people return to work.

Nevada eliminated its exclusive state fund in 1999, and West Virginia did so as of January 1, 2008, based on legislation enacted in 2005. Employers who previously were insured by the state fund subsequently obtained coverage from private insurers (including the successor to the state fund) or became self-insured.

NOTE: The small amounts of private insurance benefit payments in states with exclusive state funds are attributable to employers who are under the federal Longshore program; those who have multistate riders on their insurance policies covering these states; and the fact that some excess workers' compensation coverage for self-insurance is included in reports to A.M. Best. The states with exclusive state funds and changes in their payments from 2011 to 2012, are Ohio (-2.2%), North Dakota (60.6%) Washington (-42.2%), and Wyoming (-42.4%).

Self-Insurance Payments

Table 20 on page 33 details self-insurance benefit payments (indemnity and medical) from 2003 to 2012. The state averages in this table are determined by dividing the national totals by the total number of jurisdictions (forty-nine). Table 21 on page 34 displays the percentage change by state from 2003 to 2012. The national totals in this table are determined by using the differences in national figures from Table 20, while the state averages in this table are determined by adding all the percentage changes for a given time period and then dividing this number by the total number of jurisdictions.

Annual Self-Insurance Indemnity and Medical Benefit Payments

Year	National Total (\$000)	Annual Change In Amount (\$000)	Annual % Change
2003	\$12,717,377	NA	NA
2004	\$13,114,671	\$397,294	3.1
2005	\$13,709,664	\$594,993	4.5
2006	\$13,124,561	-\$585,103	-4.3
2007	\$13,481,643	\$357,082	2.7
2008	\$13,855,391	\$373,748	2.8
2009	\$13,950,319	\$94,928	0.7
2010	\$13,556,795	-\$393,524	-2.8
2011	\$14,414,610	\$857,815	6.3
2012	\$14,765,132	\$350,522	2.4

Self-insurance includes individual self-insurance and group self-insurance. Total self-insurance payments increased by \$909.7 million (6.6%) from 2008 to 2012, and by \$2.0 billion (16.1%) from 2003 to 2012. Total self-insurance payments increased in most states from 2011 to 2012, with the largest increases occurring in Arkansas (27.9%), Colorado (30.5%), South Carolina (27.7%), Tennessee (19.8%), and Utah (20.1%). The states and the jurisdiction with the largest decreases during this period were Arizona (-8.9%), the District of Columbia (-57.5%), Illinois (-14.4%), Indiana (-21.4%), and Michigan (-11.1%). The national 2.4% increase from 2011 to 2012, followed a much larger 6.3% increase from 2010 to 2011. North Dakota and Wyoming do not permit self-insurance.

State Funds

Table 22 on page 35 details state fund benefit payments (indemnity and medical) from 2003 to 2012. Table 23 on page 36 displays the percentage change by state from 2003 to 2012. The national totals in this table are determined by using the differences in national figures from Table 22, while the state averages in this table are determined by adding all the percentage changes for a given time period and then dividing this number by the total number of jurisdictions (twenty-four).

State Fund Indemnity and Medical Benefit Payments

Year	National Total (\$000)	Annual Change In Amount (\$000)	Annual % Change
2003	\$10,442,190	NA	NA
2004	\$11,146,216	\$704,026	6.7
2005	\$11,060,063	-\$86,153	-0.8
2006	\$10,555,015	-\$505,048	-4.6
2007	\$10,152,732	-\$402,283	-3.8
2008	\$10,275,618	\$122,886	1.2
2009	\$9,936,123	-\$339,495	-3.3
2010	\$9,778,821	-\$157,302	-1.6
2011	\$9,783,027	\$4,206	0.0
2012	\$9,886,742	\$103,715	1.1

Total state fund payments decreased by \$388.9 million (-3.8%) from 2008 to 2012, and by \$555.4 million (-5.3%) from 2003 to 2012. Total state fund payments increased in most states from 2011 to 2012, with the largest increases occurring in New Mexico (10.4%), North Dakota (19.7%), Oregon (17.3%), South Carolina (30.9%), and Texas (8.8%). The states with the largest decreases during this period were Arizona (-10.1%), Ohio (-4.7%), Oklahoma (-4.8%), Pennsylvania (-10.7%), and West Virginia (-10.4%). There was a 1.1% national increase from 2011 to 2012, which followed no increase from 2010 to 2011.

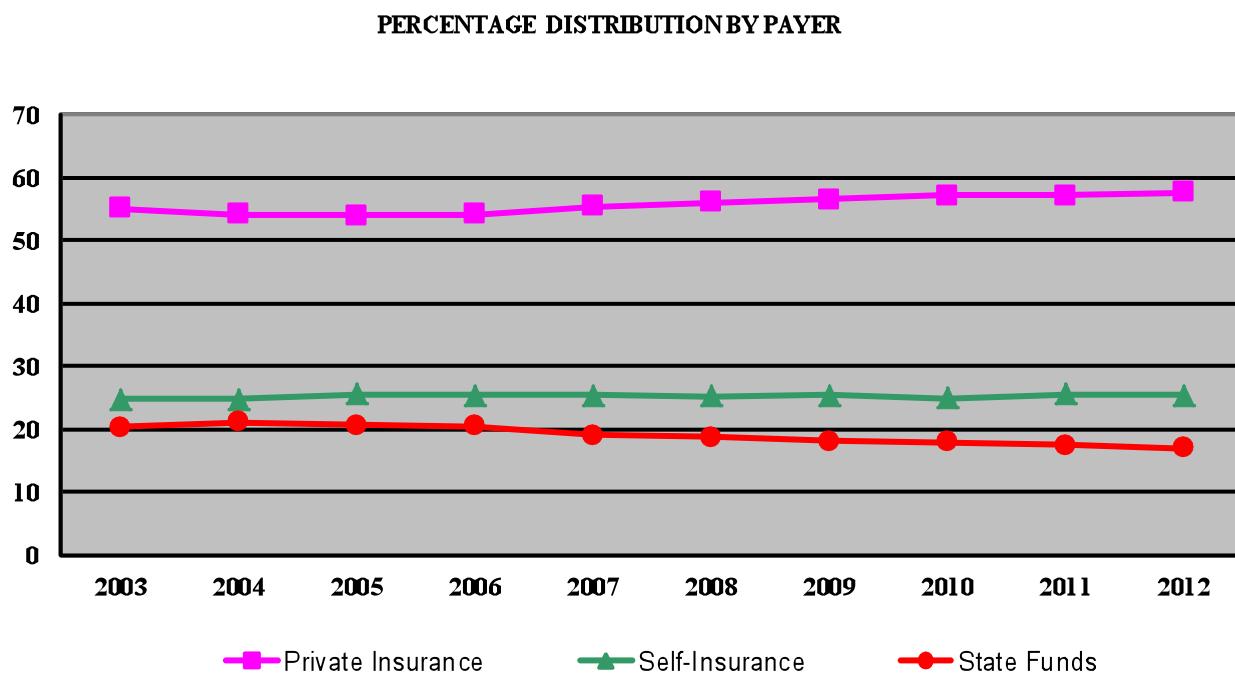

Twenty-six states have state funds. Ohio, North Dakota, Washington, and Wyoming have exclusive state funds, meaning that employers can buy workers' compensation insurance only from these funds and not from private insurers. The Hawaii, Kentucky, Louisiana, Maine, New Mexico, Rhode Island and Texas state funds have been organized as employer mutual insurance companies. (Readers should note that this report uses the NASI methodology for determining how to categorize state funds.)

In 2005, West Virginia enacted legislation to privatize its insurance market. Pursuant to this legislation, on January 1, 2006, the state abolished its Workers' Compensation Commission and replaced it with a new private mutual insurance company called BrickStreet Mutual Insurance Company. On July 1, 2008, West Virginia opened its insurance market to private carriers. BrickStreet will still be the only source of workers' compensation coverage for all state agencies, boards, commissions and institutions of higher education through 2012, after which they can purchase coverage from any insurance carrier licensed to conduct business in the state. Please note that although the West Virginia state fund was no longer selling policies in 2009, it was still paying benefits for policies sold in previous years.

Please also note that the South Carolina state fund insures only public entities and not private businesses. State agencies insure through the state fund, a decision which is optional for city and county agencies. The decision to include the South Carolina state fund as a state fund was based on its denomination as such by the American Association of State Compensation Insurance Funds (AASCIF).

Percent of Total Payments by Payer

Table 24 on page 37 details the percentage of total payments made by private insurance carriers, self-insurers and state funds in 2012. Tables 25-27 on pages 38-40 detail this information from 2003 to 2012. The state averages in these tables are determined by adding all the benefits or percentage changes for a given time period, and then dividing this number by the total number of reporting jurisdictions per category. The national totals are determined by dividing the total amount of benefits per category by the total amount of benefit payments for a given time period. The national percentages paid by each payer from 2003 to 2012 are noted in the following graph:

The most obvious conclusion from the graph is that the national percentage of total benefit payments made by private and self insurers remained relatively constant from 2003 to 2012. During this period, the national percentage of private insurance payments slowly increased from 55.1% to 57.6% (4.5%), and self insurance payments from 24.7% to 25.4% (2.8%). State fund payments decreased from 20.3% to 17.0% during this period. The decline in state fund payments may be somewhat attributable to the fact that as already noted, in 2005 West Virginia privatized its state fund and opened its market to private insurance as of July 1, 2008.

Medical Benefits

Tables 28-37 on pages 41-50 detail medical and indemnity payments, and the percentage of medical and indemnity benefits for each state from 2003 to 2012. The state averages in these tables are determined by adding all the percentage changes for a given year and then dividing this number by the total number of jurisdictions (fifty-one).

Medical Benefits

Year	National Total (\$000)	Annual Change in Amount (\$000)	Annual % Change
2003	\$24,890,070	NA	NA
2004	\$25,213,193	\$323,123	1.2
2005	\$25,526,176	\$312,983	1.2
2006	\$25,348,586	-\$177,590	-0.7
2007	\$26,194,865	\$846,279	3.3
2008	\$28,031,086	\$1,836,221	7.0
2009	\$27,118,181	-\$912,905	-3.3
2010	\$27,622,557	\$504,376	1.9
2011	\$29,450,419	\$1,827,862	6.6
2012	\$29,727,885	\$277,466	0.9

Tables 38-41 on pages 51-54 indicate indemnity and medical payment benefits and the percentage change for each state from 2003 to 2012. The national totals in tables 39 and 41 are determined by using the differences in national figures from Tables 38 and 40 respectively, while the state averages are determined by adding all the percentage changes for a given time period and then dividing this number by the total number of jurisdictions (fifty-one). Total medical benefit payments increased by \$1.7 billion (6.1%) from 2008 to 2012, and by \$4.8 billion (19.4%) from 2003 to 2012. Total medical benefit payments increased in most states from 2011 to 2012, with the largest increases occurring in Arkansas (9.8%), Colorado (12.0%), Maine (15.2%), New Mexico (12.4%), and North Dakota (21.7%). The states and the jurisdiction with the largest decreases during this period were the District of Columbia (-9.9%), Illinois (-18.4%), Maryland (-5.3%), Michigan (-16.1%), and Ohio (-11.6%). There was a small 0.9% national increase from 2011 to 2012, which followed a much larger 6.6% increase from 2010 to 2011.

Data Sources. Source data are collected by the National Academy of Social Insurance (NASI). NASI derives its estimates of benefits paid and employer costs from a survey questionnaire it sends to the states and A.M. Best, a private company that specializes in collecting insurance data and rating insurance companies. Additional data sources NASI uses include reports from various state and federal agencies, and the National Council on Compensation Insurance (NCCI), which is the principal data collection organization for the workers' compensation insurance industry.
